Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement		
1.	Statement		
	Novelty (N)	Claims <u>1-8</u>	YES
		Claims _____	NO
	Inventive step (IS)	Claims <u>1-8</u>	YES
		Claims _____	NO

	<p>This report makes reference to the following document:</p> <p>D1: DE-A-19712881 (SCHLAFHORST) 1 OCTOBER 1998 (1998-10-01)</p> <p>1 Claim 1 - Novelty (PCT Article 33(2))</p> <p>1.1 D1, which is considered to be the prior art closest to the subject matter of claim 1, discloses (the references in parentheses are to D1):</p> <p>fiber guide channel (14) for the pneumatic transport of individual fibers, which are combed out of a feed fiber band by an opening roller (21) that rotates in an opening roller housing (17) of an open-end spinning device (1), to a spinning rotor (3) running at high speed in a rotor housing (2) that can be subjected to negative pressure; on the inlet side, the width of the fiber guide channel (14) located in a cover element (8) for closing the rotor housing (2) is adapted to the fittings of the opening roller (21); the inlet</p>		

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
	<p>opening (48) of the fiber guide channel has a slot-like shape and the maximum extension (B) of the inlet opening (48) extends parallel to the rotational axis (55) of the opening roller (21).</p> <p>1.2 Thus the subject matter of claim 1 differs from the known fiber guide channel in that the outlet opening of the fiber guide channel has a slot-like shape; in that the maximum expansion of the outlet opening is situated at a $90^{\circ} \pm 15^{\circ}$ rotation about an imaginary center line relative to the maximum expansion of the inlet opening; in that the fiber guide channel has a zone Z between the inlet opening and the outlet opening which is substantially cylindrical; in that the fiber guide channel cross-section becomes continuously smaller from the inlet opening to zone Z.</p> <p>1.3 The subject matter of claim 1 is novel (PCT Article 33(2)).</p> <p>2 Claim 1 - Inventive step (PCT Article 33(3))</p> <p>2.1 Proceeding from the prior art, the problem addressed by the present invention is that of developing a fiber guide channel in such a way that its shape ensures extension and bundling of fibers on their way to the fiber-sliding surface.</p> <p>2.2 The solution proposed in claim 1 is neither known nor obvious from the available prior art, and therefore involves an inventive step as per PCT</p>
